Microproject

What is phenomenology?

Learning through experience

SECONDARY VOCATIONAL SCHOOL OF
ECONOMICS "PROF. DR. DIMITAR TABAKOV"

What is Phenomenology?

PHENOMENOLOGY

phenomenon = experience

lógos = study

Phenomenology is a philosophy of experience. For phenomenology the ultimate source of all meaning and value is the lived experience of human beings.

Edmund Husserl (1859-1938), is the "father" of the philosophical movement known as phenomenology.

Back to the things themselves!

In this philosophy lesson we are asked to explain **phenomenology** from different points of view:

- from the point of view of a family
- from the point of view of a doctor
- from the point of view of a journalist
- from the point of view of an ordinary TV viewer

A young woman dies in a crash.

Doctor, how is our daughter?

They told us she had an accident. Is she okay?

**Can we see her?
Please, tell us
something.**

**I'm sorry but we
couldn't save her
life. When she was
brought to the
hospital, it was too
late!**

A young woman died in an accident on the Hemus highway.

The accident happened at 10 o'clock in the morning.

The cause of the accident wasn't specified, but the woman was probably driving at an exceeding speed.

There were three more people in the car. The woman has died, the others have been taken to hospital.

**And now the
weather
forecast.**

**Come on, are
you ready?**

**Just a second.
What did they
say on the
news?**

**Nothing special,
there was a
crash. Stop the
TV. Shall we go?**

**Wait, wait, I want
to see the
weather
forecast.**

Phenomenology is the study of structures of consciousness as experienced from the first-person point of view.

Death of a young woman.

The point of view of her parents
- our life doesn't make sense after her death.

Doctor's perspective
- just a job.

The point of view of the journalists
- another bad news.

The point of view of the ordinary TV viewer
- I don't know this girl!

Social-emotional learning teaches us how to identify and manage our emotions and interactions with other people.

Emotions are the main driving force in learning, decision-making, creativity, creating relationships, and are a major prerequisite for mental health.
