

Promoting School Life

Everybody has different interests so each one of us likes something various. Here are some photos of our favourite activities at school.

Some of us are interested in Maths and like algebra or geometry.

Others are interested in Physics and Chemistry which can be sometimes great fun, especially, during our experiments with chemicals.

Each lesson we get to know some interesting facts about our ordinary lives. We exactly know how we breathe and how cars work as well and much more.

What is more we enjoy learning about other countries and cultures. We also want to know where all countries and big cities are located. No wonder we study from maps very much. On top of this we can see lots of photos from all over the world so we easier imagine how people live in different parts of our planet. To sum up Geography is an attractive subject.

Naturally our school has a great library where we can go whenever we want and borrow books we need or want. It is a nice room where we can study or read.

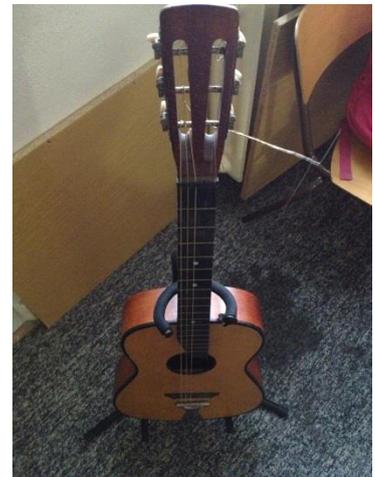

Believe it or not we also like singing. A few times a year we have a performance so we can show up what we have practised.

Of course perfect parts of our time at school are breaks. We can chat with each other and make new friends. We have a cantina on the ground floor where we can buy almost everything.

Moreover we have a chance to play the guitar and sing with our friends during our breaks so we can have even better time with music.

When we are on a school trip we learn about new topics and also we spend amazing time with our friends. Some excursions are more about technologies the others about cultures and at some excursion we for example go canoeing, skiing or riding bikes.

Considering everything our school is great with amazing people including teachers and all of us have perfect time there.
