

waste

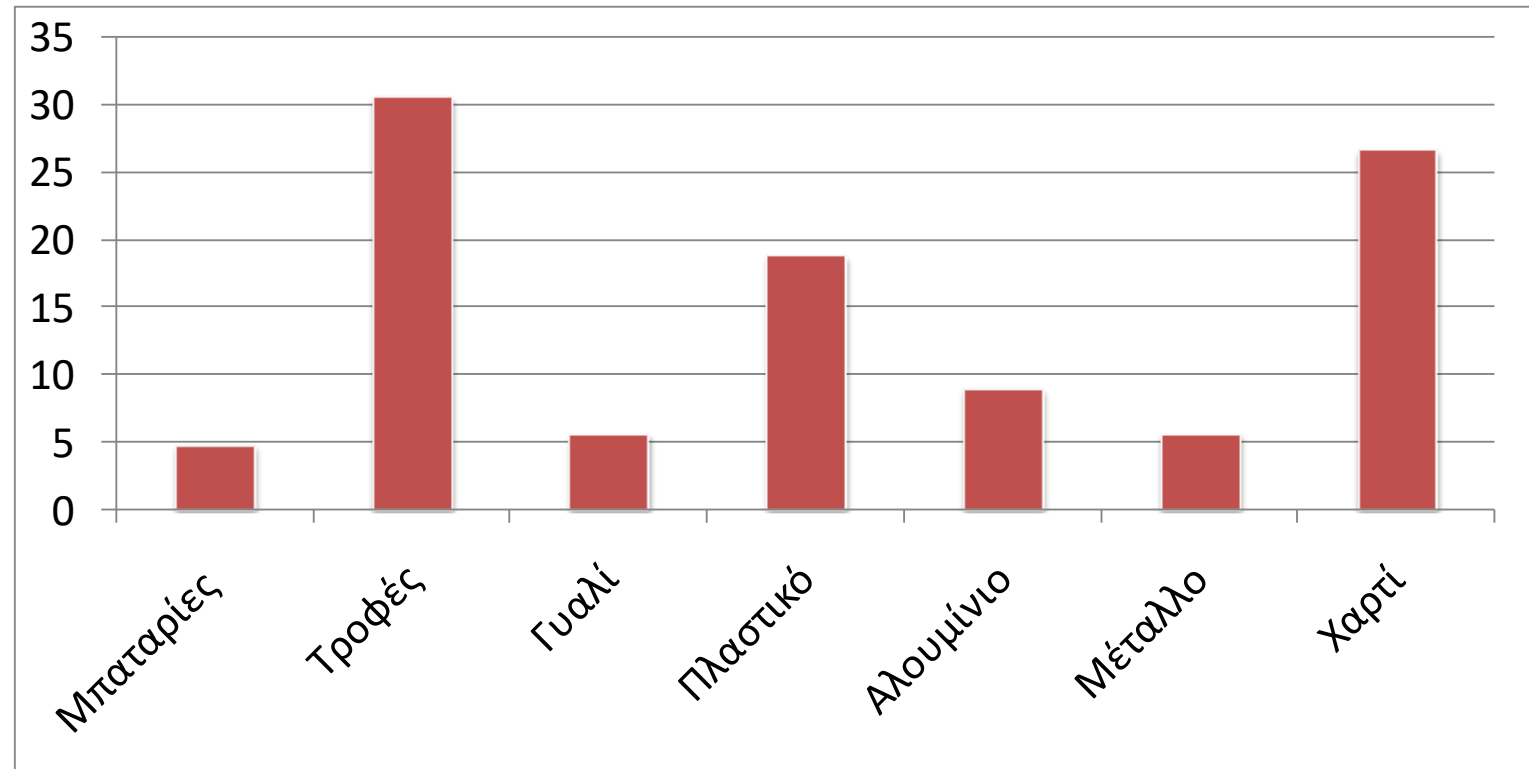

The problem of waste is particularly important for our public health.

The first thing we did was to prepare a questionnaire on the type of household rubbish.

ΕΙΔΟΣ ΑΠΟΡΙΜΜΑΤΩΝ	ΠΟΣΟΣΤΟ %
Τροφές	30
Χαρτί	26
Πλαστικό	19
Αλουμίνιο	9
Γυαλί	6
Μέταλλο	6
Μπαταρίες	4

From the chart, we notice that the bulk of garbage per week consists of food, followed by paper. Minimum is the amount in glass, metal and batteries.

On the first question, if there are recycling bins near the house, they replied:

On the next question whether they do house recycling replied:

We
photographed
some
neighborhood
spots around the
school.

We have proposed solutions to address the problem

- Inform and raise awareness of recycling and its benefits.
- Use shopping bags or paper bags in our shopping
- Use large packages on the products we consume.
- Encourage the re-use of some products such as clothing, glass and plastic packaging.

We have sent our message
