

Erasmus + Sustainable development,

2.period

5.grade

We had our focus on wind energy, sun energy and water energy.

We started our first lesson talking about what sustainable energy was and how different countries are using sustainable energy.

Our next lesson was about wind energy and about how windmills work. The students made their own little windmill.

Sun energy was our next topic. We talked about pros and cons when using sun as a energy source.

Our last topic was about the energy we can get from water. We went on a trip to our local waterfall where we got to see it in action. We recreated some old pictures from the waterfall and talked about what we used the waterfall in the old days and what we use it for now in modern times.
