### Throw away food

## Some Conclusions

1. About the way of transportation we have not so many changes but we can see an **increase in bike usage** after 2 years of project activities
2. Students are recycling more and take care of your own trash when they are outside (beach, camping...)
3. More students are using economy lamps and save up energy
4. They have reduced the usage of plastic bags
5. In the beginning 12,7% were using more than 10 plastic bottles per week, while now noone need more than 10
6. Now 55,8% use only 1-2 per week and only 14% use more than 5 bottles per week while in the beginning 36,7% were using 1-2 bottles and 22,8% were needing more than 5 bottles per week.
7. More students prefer seasonal food
8. More students have changed attitude and they have reduced to throw away food
9. Although the first time there were a few students who answered that they used to throw away their old clothes, in the end of the project there was only one. Almost all students even give away or recycle them
