

Trees and plants from the Exile route

La Vajol-->Les Illes

1rESO-A

LaVajol (Catalonia)--> Les Illes (France)

- You will find different types of forests, like:
- Deciduous trees: eg. white or chestnut oak.
 - holm oak forests.
 - scrub, meadows and grasslands

Quercus ilex

**Nom català/ english:
Alzina/ Holm Oak**

Characteristics:

It is an evergreen tree of large size. The leaves are very variable in shape, most frequently narrowly oval or ovate-lanceolate, 4-8 cm long. Fruits are acorns usually 12-18 mm long

Teucrium scordonia

**Nom català/ anglès:
Escorodònia/ woodland germander**

Teucrium scordonia is a species of perennial herbaceous plant of the Lamiaceae family, it reaches on average 30-60 centimetres of height. The leaves are petiolate, irregularly toothed, triangular-ovate. Yellowish flowers bearing four stamens with reddish or violet filaments.

Castanea sativa

Nom català/english:
Castany/ Sweet chestnut

Characteristics:

The Chestnut tree measure 25-30m. His trunk is short and thick. Their leaves are serrated. Their fruits are the chestnuts.

Pteridium aquilinum

Nom català/english:

FALGUERa AQUILIS / bracken FERN

Characteristics:

Ferns are very easily distinguished from other plants because they have very peculiar leaves, called fronds. They are used as ornamental plants inside houses, but are also found in nature next to fountains and humid places.

Quercus petraea

Nom català/english:
Roure albar/ Sessile oak

Sessile oak is an oak belonging to the fagaceae family. It is a large deciduous tree, The leaves are broad, evenly lobed with five to six lobes on each side. The fruit is an acorn.

Quercus humilis

Nom català/english:
Roure Martinec/ White oak

Characteristics:
The martinique oak is an average deciduous tree that can reach 25 meters. Leaves simple, alternate and marcescent. **Fruit:** acorns grouped on a single peduncle with a hairy dome

It is the quintessential oak of the sub-Mediterranean countries.

Juniperus communis

Nom català/ anglès:
Ginebré/ juniper

Characteristics:

Small tree or shrub in the cypress family. It has needle-like leaves in whorls of three. The fruit are berry-like cones, initially green, ripening in 18 months to purple-black with a blue waxy coating.

Calluna Vulgaris

Nom català/ english:
Bruguerola/ Heather

Characteristics:

This plant is original of Europa, Nord of Africa and America.. It is bush with pink flowers
