# Duomenų vagystės ir klastojimas

Duomenų vagystė „phishing“ (angl. terminas phishing kilęs nuo žodžių password fishing - slaptažodžių žvejyba) - tai tokia sukčiavimo forma prieš organizacijas ar privačius asmenis, kai pasinaudojant nepageidaujamomis elektroninio pašto žinutėmis ar falsifikuotais internetiniais tinklalapiais siekiama išgauti prisijungimo prie informacinių sistemų slaptažodžius ar kitus konfidencialius duomenis.

## GRĖSMĖS:

- konfidencialių duomenų vagystės;
- banko sąskaitų kontrolė.

## SLAPTAŽODŽIŲ

# Benefits

- **Simple.** All you need to do is save your content in a pre-arranged design template, you can add your own badges, change colors, or use your photos. Usually the design will look good especially when it doesn't improvisational. The program also works on your tablet.
- **Divided by topics.** The program can choose from hundreds of design templates, broken down by different categories: social media (Instagram, Tumblr), Documents (CV, certificates, presentations) or marketing materials (posters, leaflets, etc.).
- **Free.** The great part of the proposed designs is free. Additional options and more complex blanks will be required.

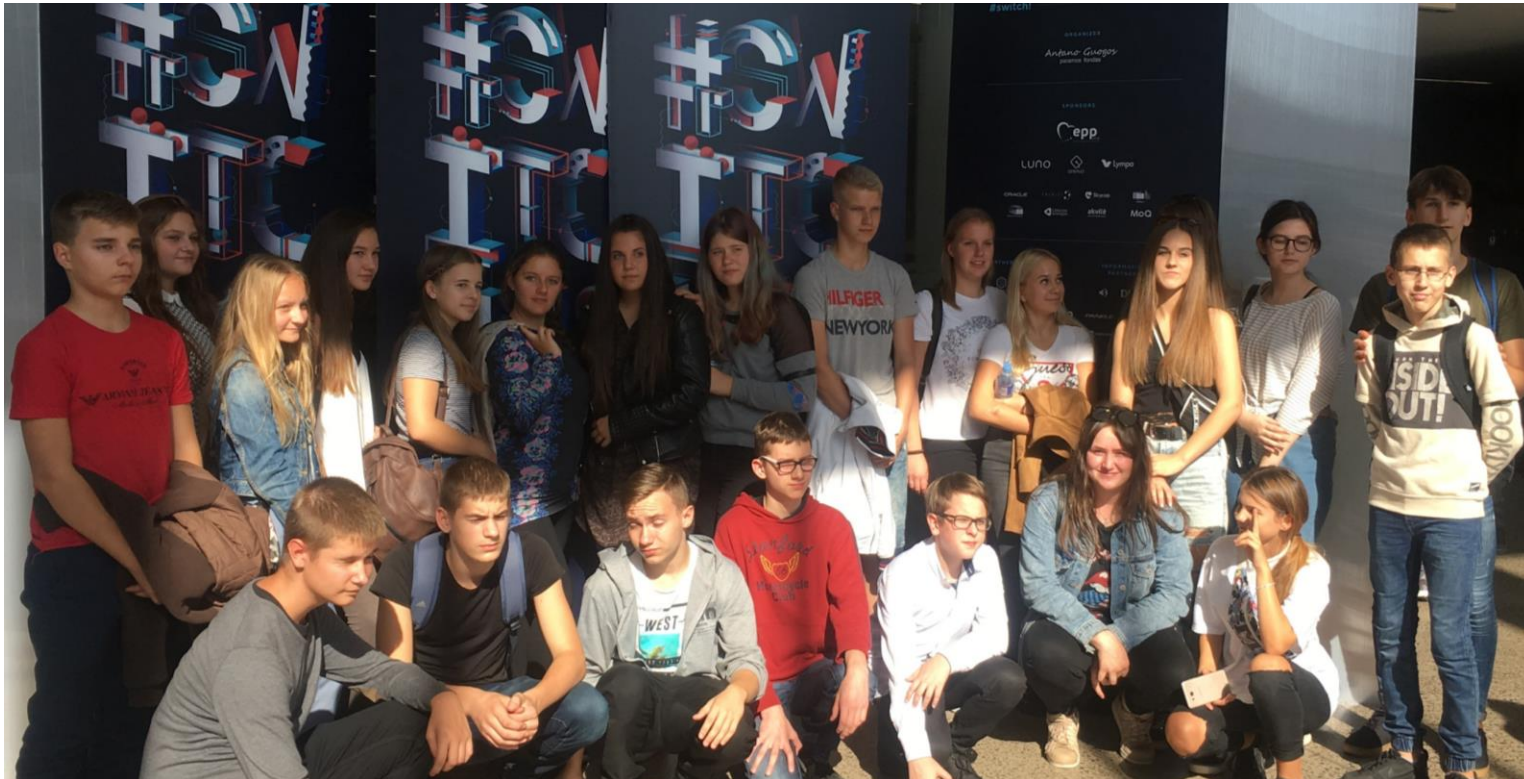

- **The program is online.** If you have a larger project, it can sometimes break up and do not save.  
For unexplained reasons it is impossible to preserve your own change.  
You should create an additional copy of the design and edit it.
- **The extra features are free.** Most of the designs are free, and really are from the choice of things.  
If you want to work more seriously, it's worth paying.  
You then have access to additional designs and features (such as changing the size of your photos, organizing designs into folders, using your fonts).

## „Canva“ – very good ICT tool

- The Canva app has so far been a favourite user for not having any special design knowledge to create a good looking picture: A postcard, a label, or a record for a social network.
- This will make it even easier to use only the phone.
- Available for download app and IPAD:
