Earth

- **Earth is the third closest planet to the Sun.**
- **Average distance to the sun: 149.6 km.**
- **A day on Earth is divided into 24 hours ,but in fact it takes Earth 23 hours, 56 minutes and 4 seconds to rotate around itself.**
- **An Earth-year is the time it takes for the Earth to complete one revolution around the Sun.**
- **So far, the Earth is the only known planet in the Universe to harbour life.**

Other stars explode before they become black holes and send all the matter inside them through space. We know that all the elements we are made of were created inside the bellies of these stars that exploded a long time ago. All the people on Earth, the animals, the plants, the rocks, the air and the oceans are made of elements forged inside of stars.

George's secret key to the Universe
by Stephen and Lucy Hawking
