

Geothermal Energy

Kacper Szeliga, Mateusz Bartoszak

Solar Panels

The most common renewable energy in the municipality Inowrocław are solar panels on homes and a lot of farms with solar panels.

My commune is one of the least polluted communes in Poland. The commune of Inowrocław even won the cleanliness competition for which it got several electric buses. Noise or pollution are very rarely renovated in my municipality.

In my municipality, the most common renewable sources are solar panels on the roof of houses. They are now very popular in Poland. Some people also have panels on the balcony.

What is geothermal energy?

Geothermal energy - thermal energy of rocks, water and soil beneath the Earth's surface, classified as renewable energy sources.

End

This is the end of our presentation, we hope you liked it.
