

Hello Selin and Tuana ☐ ☐

I am Juliette, I am 15 years old, I live in Condé sur Iton. I study at the Immaculee in Damville. It's a private school. I participate in the E-twinning project, I am here to help you reduce environmental problems and find solutions.

- 1) There are a lot of waste materials around.
- 3) Everywhere is dirty.
- 5) There are some other things in the recycle bins.

You can create an awareness campaign to let people know that this is an important cause. To force people to make them understand that it is important not to leave waste everywhere, to be careful to sort the waste in recycling bins, to maintain a routine. Why not create posters to implement this campaign ? I think it's a good idea.

- 2) There are some masks on the floor.

You can make it a task for the students who are punished: pick up the masks and if possible the other waste that is in your school.

- 4) They harm the trees and flowers while playing ball and running.

You can create specific playgrounds that would prevent the degradation of flowers and trees. Why not put barriers (a sort of fence) around trees and flowers and put up a warning sign? To make others understand that the environment must not be degraded

- 6) The stray dogs are hungry. They can't find any food especially in winters.

I think you can create a dog food collection so they don't miss out of food especially in winters.

In my school, there are environmental problems :

- 1) There is too much food waste at the canteen. Students don't eat everything they take for lunch.
- 2) In the school, the lights are often on when you are not there
- 3) In the courtyard, there is a lot of waste: masks, food packaging etc.

I hope I have helped you and that it will allow you to have less environmental problems. I wish you a good day and a happy end of the year Selin and Tuana !!!

Bye ☐ ☐

Juliette
