LEXIQUE GENERAL SUR L'ECOLE

LEXIQUE SPECIFIQUE

ASH – COMPETENCES GENERALES

Attention Deficit Disorder (ADD): A severe difficulty focusing and maintaining attention. This disorder does not include the symptom of hyperactivity. Other symptoms include disorganization, forgetfulness, as well as difficulty managing focus.

Attention Deficit Hyperactivity Disorder (ADHD): A severe difficulty focusing and maintaining attention, in addition to various combinations of poor attention, poor impulse control, and hyperactivity.

PRE Plan d'enseignement individualisé Individualized Education Plan (IEP): A plan developed for a specific child that outlines what that child needs in a specified period of time and what special services need to be provided based on the child's ability. The IEP process is a way for you and the school to talk about your child's needs and to create a plan to meet those needs.

Learning Styles: by following verbal instructions (**auditory learning**) / by physically manipulating objects (**kinesthetic learning**) / by using graphic organizers, images and maps (**visual learners**).

Motricité fine Fine Motor Skills: Using small movements of hands, wrists, and fingers, or using the small muscles of the fingers to pick up or hold little objects. Examples of using fine motor skills include using utensils, tweezers, scissors, pencils, paintbrushes and various other items to write, or using items such as play dough to create.

Motricité (globale) Gross Motor Skills: Using large muscles for activities such as crawling, running, jumping and throwing.

EVALUATION

Tronc commun / Socle commun Common Core Standards: A set of educational standards that describe what students should know and be able to do in English Language Arts and math in each grade from kindergarten through 12th grade.

Programme Curriculum: A course of study offered by a publisher or created by an instructor. These are detailed outlines (**grandes lignes**) of all the content that must be covered in those grade levels.

Evaluation Assessment: Another name for a **test**. An assessment can also be a system for testing and evaluating students.

Evaluation formative Formative Assessment: A formative assessment is a quick review of a lesson just taught. For example, if you taught a lesson about the sound for "b" you might provide the child with several words (ball, balloon, pink, tall, basket) and ask the child to tell which of these words begin with /b/ (b-sound). This formative assessment would indicate if the child could discriminate the b-sound from other sounds.

LECTURE - READING

Principe alphabétique Alphabetic Principle: Recognizing the relationship between speech sounds and letter forms. For example, Pp stands for the /p/ sound.

Décodage Blending: The ability to build words by blending individual sounds together in sequence. For example, /b/ /a/ /t/ = bat.

Consonant Vowel

Déchiffrable Decodable: Words that can be sounded out. For example, "c-a-t" or "t-a-k-e".

Décodage Decoding: The process of reading words in text. When a child reads the words, "The cat is big," it is necessary for the child to understand what the letters and their sounds are and how they blend together to create words.

Encodage Encode: The process of using the knowledge the child has about letters and sounds to write. For a child to be able to write the sentence, "The cat is big," he or she needs to recall the sounds and the letters in each word and how those letters and sounds work together to form the words.

Lecteur débutant Emergent Reading: Readers who are beginning to grasp the basic concepts of books and print. They are beginning to recognize and name upper and lowercase letters and are developing many phonological awareness skills such as recognizing phonemes, syllables, and rhyme. Emergent readers are also beginning to learn sound/symbol relationships, starting with consonants and short vowels (consonant vowel consonant or CVC words such as cat), as well as recognizing some high frequency or sight words.

Conte Fairy Tale: A work of fiction, often geared toward children. It usually includes fanciful characters and magic. For example, *The Elf and the Shoemaker* is a common fairy tale taught in kindergarten.

Conte populaire Folk Tale: A narrative that has been retold and is well known within a specific culture. *The Little Red Hen* is a folk tale typically taught in kindergarten.

Aisance à lire/écrire Fluency: Spoken or written with ease. For example, if a child reads fluently, he or she does not struggle recognizing the words in a text.

Mots de haute fréquence High Frequency Words: Words emergent readers see frequently in print and can recognize easily. They are sometimes referred to as sight words. For example, the, would, and said are high frequency words.

Phonétique Phonics: A method of teaching children to read and pronounce words by teaching them the sounds of letters, letter groups, and syllables. Phonics enable readers to decode written words by sounding them out, or blending the sound-spelling patterns.

Conscience phonologique Phonological Awareness: The ability to identify, hear, and manipulate the smallest speech sounds without print. It involves using the ears only.

Segmentation Segmenting: Breaking apart words into individual syllables or sounds. It is the opposite of blending sounds or syllables to form words. For example, the child breaks the word "run" into individual sounds - r, u, and n.

Reconnaissance globale de mots Sight Words: Commonly used words that young children are encouraged to memorize so they may easily recognize them in print rather than rely on strategies to decode them. They are sometimes referred to as high frequency words. Sight words are critical to reading since many of them cannot be easily decoded or sounded out, and they are so frequently used. For example, the, said, and what are sight words.

Reconnaissance des mots Word Recognition: The ability to see and understand a word quickly without having to sound it out.

MATHEMATIQUES

Décomposer Decomposing: Breaking a number apart. For example, $7 = 5 + 2$, $10 = 4 + 6$, $34 = 30 + 4$, or $15 = 5 + 5 + 5$.

Manipulations Manipulatives: Physical objects children can touch and move (manipulate) to solve math problems. For example, cubes, blocks, counters, or tiles.

Compréhension / construction des nombres Number Sense: The ability to use and understand numbers.

Correspondance un à un One-to-One Correspondence: The ability to match one thing to another, such as moving ahead two spaces on a game board or matching the number 5 to five fingers.

Numération - numération

Valeur de position Place Value: Place value helps us determine the value of numbers. Our number system contains numerals (or digits) from 0 through 9, but we often need to use numbers greater than 9. We show numbers greater than 9 by using place value, which means that the value of a numeral or digit is determined by its place in the number. For example, in the number 48, the 4 represents four sets of 10 and the 8 represents eight ones.

Compréhension en lecture Reading Comprehension: A process in which readers construct meaning by interacting with text through the combination of prior knowledge and previous experience, information in the text, and the stance the reader takes in relationship to the text. Comprehending what we read is the purpose for reading.

Regroupement Regroup: The process of creating groups of ones into tens to make adding and subtracting easier. This is another name for carrying and borrowing.

Comptage par bonds Skip Counting: Adding a number other than one to get the next number. For example, skip counting by twos means adding two to get the next number (2, 4, 6, 8, 10) and skip counting by fives means adding five to get the next number (5, 10, 15, 20, 25).
