

A thick black L-shaped frame is positioned on the left and bottom edges of the slide, framing the central text.

# POLLUTION IN CAMPANIA

The most dangerous type of pollution in  
Campania

# The air pollution in Campania

- In Campania there aren't a lot of big cities so there isn't a lot of light pollution or noise pollution. There is water pollution but the most dangerous type of pollution is air pollution because in my region there are some zones called "lands of fires". In these zones people throw a lot of waste, cars and then they burn them. This causes a lot of fires and these fires pollute air.
