

# A gift of nature... Let's not take it for granted !!!

**Wash dishes, fruit and vegetables in a basin: you will save 6,000 litres of drinking water per year**

**Keep the taps open only for the time necessary: while brushing your teeth, shampooing and soaping, we can close them and save 6,000 liters of water a year**

**For washing machines and dishwashers it uses the ECO cycle .. they reduce energy and water consumption**

**Water the plants in the evening: the water evaporates more slowly and penetrates deeper into the soil**

**Choose a shower instead of a bathroom: you will save 1,200 liters of drinking water a year**
