

REDUCE WATER CONSUMPTION

1.Repair the faucet that drips

Those small drops that fall from the tap,summed to many others,are wasted.But if we fix the tap,we save a lot of water.

2.He washes the car using the bucket and not the running water of the jet

It has been calculated that when we wash the car we take about 30 minutes with very high water consumption.If we used a bucket,we could save about 100 litres of water at each washing.

3.It uses water already use to water the garden,flowers or plants

To water the garden or flowers,it is not necessary to use drinking water,it may use water already used for other purposes ,for example the vegetables.This can save about 6.000 litres of drinking water.
