## Women who were scientists and their discoveries

shutterstock.com • 321601295

Women made contributions to science from long time ago. There are a lot of women who became scientist through history an-d, although they existed, people didn ´ t know about them and still considered women as inferior humans. All this was until some people (both men and women) decided to write about them. In the decades of 1970 and 1980 a lot of books about women scientists were being published, they were achieving their rights! However most publishers ignored those books and didn ´ t pay much attention to them. Nowadays women keep fighting for their rights and they have achieved a lot of them, our must sincere congratulations!

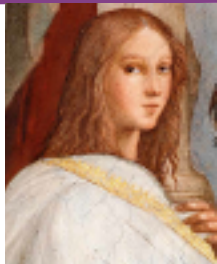

Ada Lovelace was the first person to develop a computer code, she discovered that with symbols and some basic mathematical rules, she could calculate enormous numbers. Her computer code was essential for computers to develop, so we should thank the English scientist.

Rosalind Franklin was one of those scientists whose work was underrated. She took the photo that proved that the DNA was as we know it today,

# Woman in science

Hypatia of Alexandria was an Egyptian scientist. She was the first woman to make substantial contribution to the development of mathematics. However she was assassinated.

Marie Curie was one of the most famous scientists, not only for being a woman but for being the only person to win two Nobel prizes and because she discovered the radiation. Nowadays she is a symbol of the feminism movement.
