# Science

Since ancient times and through the history, women have made important contributions to the scientific and technological development of humanity, what happens is that the men culture that governs our society have been invisible considering them inferior to men from the point of view of intellectual view; they are placed in their traditional roles. Most of them have been forgotten.

Jane Goodall

Lise Meitner

Jane Goodall lived her childhood and youth, surrounded by animals and dreaming of writing about animals in Africa. At age 23, she travels to Kenya. With the only company of his mother and a cooker, she planted his tent in the jungle and began his research project that would last 6 months in theory, and which continues in the present after approximately 58 years, which constitutes one of the most important field investigations. prolonged on animals in freedom.

The results of his exhaustive field research revolutionized the scientific community and fascinated the entire world. Their perseverance, intuition, empathy and ability to observe allowed them to learn more about the unknown world of chimpanzees, revealing their instrumental behavior, social structure, foraging, hunting, war between groups, altruism, dominance, cannibalism, breeding and adoption, among many others aspects.

She studied in, the universities of Vienna where it entered in 1901 and doctoró in 1907,

He worked with Otto Hahn in an investigation that lasted more than thirty years, with whom he discovered protactinium in 1918.

a substance that would help the creation of the atomic bomb.

Jane Goodall's research was about the apes.
