

To compare the size of the planet Pluton (2370 km) with the size of Charon-Pluto`s Satellite (1212 km)

Is the same as comparing the Tour Eiffel (325 m) with the Tour Iberdrola, Bilbao (165 m)

Explanation:

Pluton = 2370 km = 2370000 m

Charon = 1212 km = 1212000 m

$2370000 \div 1212000 = 1,955445544554455 = 1,96$ (aprox.)

Tour Eiffel = 325 m

Tour Iberdrola = 165 m

$325 \div 165 = 1,96969696969697 = 1,97$ (aprox.)
