

Comparisons

To compare the size of the Baker's yeast ($5 \cdot 10^{-6}$ m)

$$\frac{5 \cdot 10^{-6}}{5 \cdot 10^{-9}} = 1000$$

with the size of hemoglobin molecule ($5 \cdot 10^{-9}$ m)

is the same as comparing the Arc de Triomphe in Paris (50 m)

$$\frac{50}{0,05} = 1000$$

with a key (0,05 m)
