# I decided to compare:

Pluton: 2370 km

Jupiter: 142 984 km

Calculation:

- I divided the largest (Jupiter) by the smallest (Pluto).

$$142\ 984 : 2370 = \underline{60}$$

It can correspond to:

Columbus Monument: 360m

Pont de Saint-Nazaire: 3 356m

Calculation:

- I divided the largest (Jupiter) by the smallest (Pluto).

$$142\ 984 : 2370 = \underline{60}$$

- I'm going to divide the biggest (Saint Nazaire bridge) by the smallest (Columbus monument).

$$3356 : 56 = \underline{60}$$

Finally:

142 984 : 2370 =   3356 : 56 = 60
