

Life Scales Project Comparisons

To compare the height of the Monte de Maragoutos in Portugal (509 m)

with the diameter of the planet Mars (6 790 m)

is the same as comparing a grain of rice (0,006 m)

with the tube of glue (0,08 m)

$$\frac{6790}{509} = \frac{0,08}{0,006}$$
