

Hello!

My name is Kuba and I'm 13. I'm from Poland. I go to a lower secondary school, to 1st grade. I love sports, especially football and swimming. I have been playing football since 2010. I have played in 3 different clubs MKS Zaborze, Gwarek Zabrze and Sparta Zabrze. I like maths and English.

I won a few competitions in maths and English. I live in the suburbs in quite a big town called Zabrze. It is situated in southern Poland. I have got one brother. My grandparents and many of my friends live near me. My school is near my house too. It is big, nice and beautiful. It is placed in two buildings, both buildings have 2 floors. Next to the school there are a football field and a big basketball court. In winter the best sport for me is skiing. I ski in a ski school and twice a year I compete in championships. The school is called Slalom Zabrze and once a year it organises a competition in which I take part. The second championship is organised by my home town. I play basketball in winter too, so I think I'm not so bad at it.

In the basketball test I scored 6 shoots out of 15.

$$6 : 15 = 0,4 = 40\%$$

It's not a good score, because NBA players score 85% of their shoots. My score is not even half as good as theirs.
